The BA518/547 is a monolithic integrated circuit consisting of a 1.5W output power amplifier useable over a wide range of supply voltage from 6 to 12V. This makes it ideally suited for applications such as radios, tape recorders, and turntables operating on dry batteries, AC power, or car batteries. It can operate on voltages as low as 2V with superior characteristics.

### Features

- Even equipped with a radiating fin, the compact 8-pin SIP package is no more than 15mm high above the PC board.
- Wide operating voltage range (2.5 ~ 12V)
- Superior supply voltage and temperature characteristics
- The BA547 is particularly low in current consumption.

### Applications

- Radios operating on dry batteries, car batteries, and AC power
- Tape recorders
- Turntables
