## IV. Mounting

The paper separators and the electrolytic-conductive electrolytes in a non-solid aluminum electrolytic capacitor is flammable.

Leaking electrolyte on a PC board can gradually erode the copper traces, possibly causing smoke or burning by short-circuiting the copper traces.

Verify the following points when designing a PC board.

- (1) Provide the appropriate hole spacing on the PC board to match the terminal spacing of the capacitor.
- (2) Make the following open space over the vent so that the vent can operate correctly.

<u>Case diameter</u>	<u>Clearance</u>
$\phi$ 6.3 to $\phi$ 13 mm	2 mm minimum
$\phi$ 16 to $\phi$ 35 mm	3 mm minimum
$\phi$ 40 mm and up	5 mm minimum

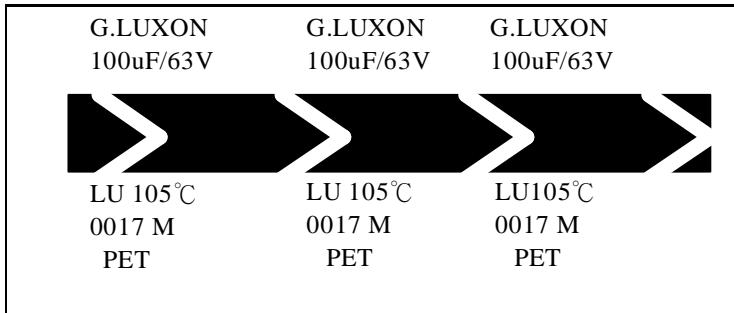

- (3) Do not place any wires or copper traces over the vent of the capacitor.
- (4) Installing a capacitor with the vent facing the PC board needs an appropriate ventilation hole in PC board.
- (5) Do not pass any copper traces beneath the seal side of a capacitor.  
The trace must pass 1 or 2 mm to the side of the capacitor.
- (6) Avoid placing any heat-generating objects adjacent to a capacitor or even on the reverse side of the PC board.
- (7) Do not pass any via holes or underneath a capacitor.
- (8) In designing double-sided PC boards, do not locate any copper trace under the seal side of a capacitor.

## V. Storage Condition

- (1) Aluminum Electrolytic Capacitors should not be stored in high temperatures or where there is a high level of humidity. The suitable storage condition is 5~35°C and less than 75% in relative humidity.
- (2) Aluminum Electrolytic Capacitors should not be stored in damp conditions such as water, saltwater spray or oil spray.
- (3) Do not store Aluminum Electrolytic Capacitors in an environment full of hazardous gas (hydrogen sulfide , sulfurous acid gas, nitrous acid, chlorine gas, ammonium, etc...).
- (4) Aluminum Electrolytic Capacitors should not be stored under exposure to ozone, ultraviolet rays or radiation.
- (5) If a capacitor has been stored for more than one year under normal temperature (shorter if high temperature) and it shows increased leakage current, then a treatment by voltage application is recommended. The capacitor which hasn't been treated mustn't be used directly.

## VI. Marking

Marking on capacitor include:

▶ G-LUXON trademark
